

# Free Surveys

## SOLUTIONS OF EXCELLENCE

### Energy Management Survey

The goal of an energy management survey is to identify areas where wasted energy can be reduced or eliminated resulting in significant savings. These include air handlers, doors, dock seals, lighting & controls to name a few. There is no charge for the survey and we will assist with rebate applications & installation.

### Material Flow Study

Our material handling systems specialists analyze the flow of material through your facilities, examining the interaction of your material handling equipment within the flow. Inventory management & control processes are also examined, including the use of bar codes & radio frequency data collection, while applying LEAN principles

### Industrial Battery & Charger Assessment

A complete assessment of your industrial batteries, battery watering, & handling system. Our material handling specialists can assist you in improving the efficiency, maintenance, & useful life of your industrial batteries & equipment.

### Plant & Warehouse Equipment Survey

A careful documenttion of all plant & warehouse products in your facility will help save you money by reducing purchasing time. Information on your equipment is compiled and all products used by your facility are cataloged in a customized online account providing you the ability to order materials on demand 24/7. Check out our Online catalog: [wisconsinlift.theonlinecatalog.com](http://wisconsinlift.theonlinecatalog.com)

### Ergonomic/Personnel Safety Surveys

After our evaluation of your current work environment, we suggest improvement to enhance personnel productivity and reduce repetitive injury on the job.

### Tire Inspection

Our tire specialist completes a careful inspection of your lift truck tires, looking for cuts, tears, embedded particles or excessive wear. When needed, our fully stocked mobile tire press truck can quickly & cost effectively install new tires.

### Fork Inspections

Our trained & certified technicians use a highly effective, eight-point check system to detect wear on your forks or other front-end attachments before costly problems arise.

### Spill Assessments

A complete survey of liquid handling & storage practice your facility helps you develop safe storage, containment, and dispensing system to reduce chances of spills or falls

### Safety Assessments

After an evaluation of your workplace that assesses damage caused by vehicle traffic and areas where vehicle traffic could cause injury to personnel, our specialists recommend products to eliminate or reduce those dangers.

### Material Handling Fleet Study

Our material handling specialists thoroughly review and inspect your equipment fleet. Critical benchmarking data is provided, including comparing your fleet performance against a national database of equipment in similar applications. Our experienced technicians know exactly where to look for trouble spots & help detect problems early, reducing maintenance & operating costs.
